Hazardous material control summary

DEMO - Carthage Materials

Cement kiln efficiency and dust abatement retrofit

Sector	Heavy industry
Location	Bizerte, Tunisia
Financing request	18,500,000 TND
Workforce	340 employees

Scenario context

Existing cement production with quarry operations. Bag filters, emissions monitoring, wastewater pretreatment and controlled hazardous waste storage are in place.

Evidence and verification status

The controlled scenario provides for dedicated monitoring records, maintenance responsibilities, appropriate treatment or containment, and traceable waste disposal. No laboratory report or real monitoring certificate is fabricated.

Presentation purpose

Inherent category A remains even with strong controls. This case distinguishes exposure classification from residual risk.
