Energy transition summary

DEMO - Meridian Cloud Infrastructure

Energy-efficient regional data center

Sector	Technology
Location	Ariana, Tunisia
Financing request	6,200,000 TND
Workforce	64 employees

Scenario context

Data center capacity expansion using closed-loop cooling and UPS systems. Grid electricity is material; energy transition targets and governance capacity need improvement.

Evidence and verification status

Total annual energy: 3,800,000 kWh; fuel: 85,000; natural gas: 0; renewables: 420,000; other: 0. Grid electricity is the remaining balance. Planned transition investment: 650,000 TND. Transition commitment: PLANNED. Targets are not verified savings.

Presentation purpose

A technology company can have category B physical exposure; software and data center profiles must not be treated identically.

This document is an illustrative software demonstration note. It is not a certificate, regulatory approval, audit opinion or document from a real company.
